# 4 Using metadata to discover relevant variables

Researchers need better access to information about data so as to be able to discover variables relevant to their research and to find variables that, although collected through different sources, are nonetheless comparable.

Whilst the standards used and the information available has improved significantly over the years, the information provided to data repositories and archives has not (in general). It continues to require large amounts of effort on the part of researchers to turn it into high quality research resources. One reason is because information about the data collection is very often detached from the datasets made available for research, and high quality data requires them to be better connected.

# 4.1 Discovering relevant variables

The <u>CLOSER Discovery</u> search engine makes it easier for researchers to explore some of the most used longitudinal studies in the UK, by tying together rich layers of information about the data collected.

It is a user-friendly resource for locating the variables that best suit your research interests.

A search on CLOSER Discovery will show you:

- relevant survey questions and variables, which you can filter by study, topic and life stage
- the original question the variables are based on
- where questions appeared in the survey, including complete routing
- the sources of derived variables (but not the derivation methodology)
- an overview of each variable, including valid and invalid cases; maximum, minimum and mean values; and in many cases, a frequency count
- how to access the data from each study.

You can save information for questions and variables of interest to a List, and download it for your reference.

# 4.2 Using 'search' and 'explore' to find relevant variables

CLOSER Discovery enables you to search for variables relevant for your research. The search engine allows you to search not only for variable names and labels, but you can also search entire questionnaires to look for words or phrases contained in question texts.

There are two main ways of doing this, briefly outlined below:

### 4.2.1 Finding a variable via search

Clicking on the search menu takes you to a page where you can enter a text-based query to look for variables containing the word(s) in the search term.

Authors: Neil Kaye, Hayley Mills and Jon Johnson

About	Closer Discovery Explore the content of UK longitudinal studies			
Search	Jogging Q Sort by: Relevance V			
Explore	θ			
List o	Item types: Variables Query: jogging			
Item Type 🔹	Results 1 to 20 of 53 (0.02 seconds)			
□ Studies (0)	📲 श्रु Jogging			
Sweeps (0) Datasets (0) Variables (-53) Questionnaires	SN (0)       SC2 (B4): How often on average did you go logging in the last year         ets (0)       ["Physical activity", "Health behaviour"]         els (-53)       Study: <u>National Child Development Study</u> / Sweep: <u>Biomedical Survey.(2002)</u> / Dataset: <u>NCDS Biomedical Paper Self-Completion 2.(2002) Dataset</u> ionnaires			
• Help	♣ %; us2_b_youth.b_ypextype4			
1.	jogging or running			

In this example, we are looking for variables containing the word 'jogging'

The search returns 53 results

Ingitudinal studies      I     Biomedical Survey (2002)     R NCDS Biomedical Paper Self-Completion 2 (2002) Dataset						
Variable Description Representation Lineage						
Name JOGGING 2 SC2 (B4): How often on average did you go jogging in the last year						
Value	- Label	Frequency	% of valid	% of all		
-9	Not answered (9) 3	204		0.00%		
-2	Self Completion 2 not done	<b>4</b> 195		0.00%		
-1	Not applicable			0.00%		
1	Not done in last year	7,426	82.71%	0.00%		
2	Less than once a month	509	5.67%	0.00%		
3	Once a month	196	2.18%	0.00%		
4	2 to 3 times a month	175	1.95%	0.00%		
5	Once a week	226	2.52%	0.00%		
6	2 to 3 times a week	343	3.82%	0.00%		
7	4 to 5 times a week	79	0.88%	0.00%		
8	Every day	24	0.27%	0.00%		

Clicking on the first of the results you can see which study and dataset the variable comes from (1).

It also provides a description of the variable, including the wording of the question (2), missing value codes (3) and frequency counts (4) and percentages (5) of responses

Authors: Neil Kaye, Hayley Mills and Jon Johnson

covery	long	jitudina	al studi	es

You can add this variable to your saved List by clicking the '+' symbol in the top-left...

About	closer Discovery Explore the content of UK longitudinal studies			
Search	This is your active list.			
Explore	Variables (1)			
	Download DDI 3.2 XML     JOGGING     SC2 (B4): How often on average did you go jogging in the last     year <u>National Child Development Study</u> / Biomedical Survey (2002)     / NCDS Biomedical Paper Self-Completion 2 (2002) Dataset			

... and you can access your List from the menu on the sidebar.

## 4.2.1 Finding relevant variables via explore

About	closer Discovery	e content of UK I studies
Search	⊕- □ Demographics ⊕- □ Housing and local environment	
Explore	<ul> <li>Physical health</li> <li>Mental health and mental process:</li> </ul>	Browse topics by Variables (using the Chart icon), or Questions (using the ? icon).
List 1	Health care      Health care      Health behaviour      Family and social networks      Exployment and income      Expectations, attitudes and beliefs      Child development      Life events      Omics      Omics	Use the buttons above to view variables and questions. Harmonized variables will be added in a later build.
€ Help ∧	C Pregnancy     Administration	

Another way of looking for variables using CLOSER Discovery is by exploring the datasets by theme, via the explore menu

About	closer Discovery	e content of UK al studies
Search	<ul> <li>⊕- □ Demographics</li> <li>⊕- □ Housing and local environment</li> </ul>	T ?
Explore	<ul> <li>C Physical health</li> <li>C Mental health and mental processe</li> </ul>	Browse topics by Variables (using the Chart icon), or Questions (using the ?
List 1	<ul> <li>Health care</li> <li>Health behaviour</li> </ul>	Use the buttons above to view variables and questions. Harmonized variable
	<ul> <li>         Diet and nutrition      </li> <li>         Physical activity     </li> </ul>	
	- C Sleep	
	Alcohol consumption	
	D Substance abuse     D Risk taking	
	- Criminal behaviour	
	🖵 🗀 Sexual behaviour	

Using the 'tree' menu we can explore topics by category and sub-category to home in on our particular focus – in this case 'Physical activity'

By scrolling through variables relevant to the topic, we can pick out those we are interested in, click into them to view a detailed description, and add them to our saved list

#### 4.3 How-to guides

You can find out more about how to use CLOSER Discovery through the <u>FAQs</u> and how-to guides The guides provide step-by-step instructions to help users find their way around the search engine.

#### How do I find variables from similar life stage across different studies?

This guide explains how researchers can use CLOSER Discovery to search for cross-study cross-sectional data, such as asthma in early childhood across all studies.

#### How do I find information about a variable from a particular study?

This guide shows how to use CLOSER Discovery to explore within-study cross sectional data, for example discover how to find information on the sex of participants in the Millennium Cohort Study.

How do I find how a variable was asked in the original questionnaire?

This set of instructions demonstrate how CLOSER Discovery can be used to find information about a source question and the wider questionnaire, for instance search the questions used to measure alcohol intake in the CLOSER studies.

## How do I compile and save a list of variables?

These step-by-step instructions explain how users can create and save lists in CLOSER Discovery for example how to compile and export a list of the diabetes-related variables collected by the Southampton Women's Survey.
